# Unsigned Binary addition

There are four ways to add two bits:

$0 + 0 = 0$	$0 + 1 = 1$
$1 + 0 = 1$	$1 + 1 = 10$

- Note: add 1 to 1 → results in 10 binary, reset and carry was performed
- The extra digit generates a *carry value* in the next-highest bit position on the left.

When adding two binary numbers of larger size:

- make sure to align at the LSB, process pair of bits starting from LSB side
- then process each subsequent pairs of bits to the left, make sure to account for carry

Start at LSB

Example: add binary 101000 + 1110

*hint: make numbers same length, you can pad with zeros on left side without changing value*

**carry:**

num1:

0	0	1	0	1	0	0	0
---	---	---	---	---	---	---	---

num2:

0	0	0	0	1	1	1	0
---	---	---	---	---	---	---	---

+

0	0	1	1	0	1	1	0
---	---	---	---	---	---	---	---

# Unsigned Binary addition

There are four ways to add two bits:

$0 + 0 = 0$	$0 + 1 = 1$
$1 + 0 = 1$	$1 + 1 = 10$

- Note: add 1 to 1 → results in 10 binary, reset and carry was performed
- The extra digit generates a *carry value* in the next-highest bit position on the left.

When adding two binary numbers of larger size:

- make sure to align at the LSB, process pair of bits starting from LSB side
- then process each subsequent pairs of bits to the left, make sure to account for carry

Start at LSB

Example: add binary 1111001 + 11110

carry:

--	--	--	--	--	--	--	--

num1:

--	--	--	--	--	--	--	--

num2:

--	--	--	--	--	--	--	--

+

--	--	--	--	--	--	--	--

# Unsigned Binary addition

**Overflow** occurs when the result of a binary operation is too large to fit in allowed number of bits.

- When adding two unsigned numbers, if the leftmost bit generates a carry bit, overflow has occurred.
- Ex: For four-bit numbers,  $1111 + 0001$  is  $10000$ , which is too large for four bits.

Start at LSB

Example: add binary  $10000101 + 10000001$

carry:

--	--	--	--	--	--	--	--

num1:

1	0	0	0	0	1	0	1
---	---	---	---	---	---	---	---

num2:

1	0	0	0	0	0	0	1
---	---	---	---	---	---	---	---

--	--	--	--	--	--	--	--

# Quiz#1 next week 2025-09-16:

Prepare and Practice

weighted sum , repeated division and binary addition

- Use Weighted Sum algorithm to convert from:

$\text{base}_2 \rightarrow \text{base}_{10}$

$\text{base}_8 \rightarrow \text{base}_{10}$

$\text{base}_{16} \rightarrow \text{base}_{10}$

**Note:** Be able to write the formula, apply the formula (show steps)

- Use Repeated Division algorithm to convert from:

$\text{base}_{10}$  to  $\text{base}_2$

$\text{base}_{10}$  to  $\text{base}_8$

$\text{base}_{10}$  to  $\text{base}_{16}$

Note: Be able to construct table for the Repeated Division algorithm as seen in lecture

- Be able to show bit-by-bit addition with carry values:

00001111 + 00000010

11010101 + 01101011

00001111 + 00001111

...

Note: be prepared to indicate whether overflow is present after addition.
